***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1 - 20 drawn to a silicon compound comprising a silsesquioxane, "cage" structure containing a plurality of R groups bonded to the silicon atom. The silsesquioxane is not completely condensed leaving three SiOH groups open for substitution with an "A" group which provides a polymerization initiating ability.

Group II, claim(s) 21-41 drawn to a process of making the various embodiments of described in Group I.

Group III, claim(s) 42-49 drawn to polymer obtained by addition polymerization using the initiators described in Group I.

The inventions listed as groups I - III do not relate to to a single inventive concept under PCT rule 13.1 because under PCT rule 13.2, they lack the same or corresponding special technical features for the following reasons: The common technical feature in all groups is the polymerization initiator from Group I. This element cannot be a special technical feature under PCT rule 13.2 because the element is shown in the prior art.

Lichtenhan et.al (US 2003/0055193 A1) teaches a silsesquioxane having "RY" groups with the polymerization initiating ability described in Group I (¶¶s 0035 and 0040).

These "RY" groups are equivalent to the "A" group. Although Lichtenhan does not describe the "RY" group as being a polymerization initiator, evidence from Nakagawa et.al (US 6,458,903) shows that the "RY" groups disclosed in Lichtenhan have "living radical polymerization" ability (col. 5, lines 43-64 and col. 7, lines 9-20).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
